

Bonar Yarns Statement on Lead in Synthetic Grass Yarns

Bonar Yarns endorses the recent work done by the Synthetic Turf Council (STC) regarding the investigation into the use of lead in synthetic turf, and welcomes the US Consumer Products Safety Commission (CPSC) statement confirming that synthetic turf is not harmful for all users from athletes to young children.

Bonar Yarns prides itself on its responsibility to the environment and to manufacturing in a responsible manner. Bonar Yarns were amongst the first yarn producers to offer environmentally friendly raw materials as early as 1999. Currently, all grass yarns produced conform to the DIN18035-7 standard for the leaching of lead and other heavy metals.

Bonar Yarns will remain steadfast in its dedication to environmentally friendly production, from raw materials to finished product, and supports industry-wide initiatives to make the grass business even 'greener'.
